Hello Michelle ~ here's another subject instead of Bowie Power Station ~ I've just read that a housing developer in the **Upper San Pedro River Basin** has requested of ADWR permission to pump an additional 3,350 acre-feet annually.

This is to say that **the request should be denied** on the basis of the current groundwater deficit; on the basis of the current drought; on the basis of over-habitation - the deconstruction of the very characteristics that make the area attractive: the results of a relatively balanced ecology.
